

Matala®

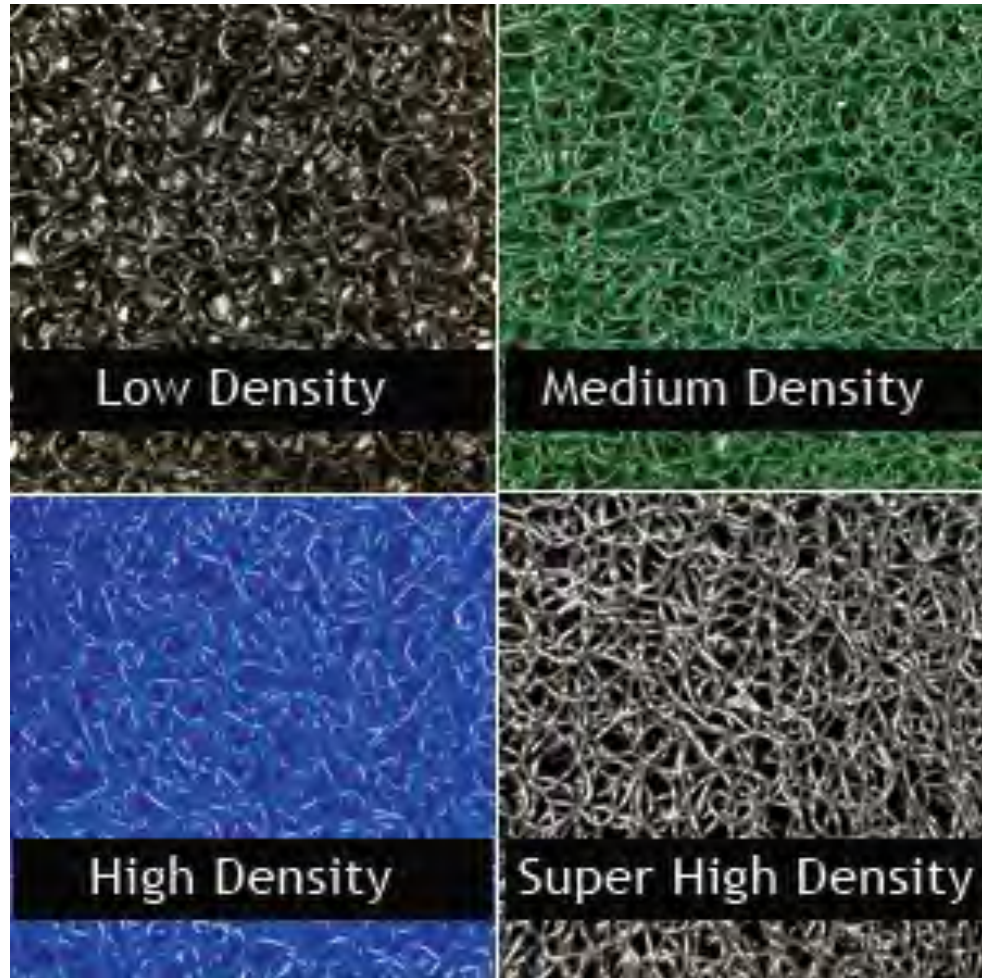

PREMIUM FILTRATION
PRODUCT CATALOGUE

Matala Premium Filter Media provides both mechanical and biological filtration.

These revolutionary, non-clogging sheets remove debris and other particles from your water while also providing a home for beneficial bacteria.

Filter Media Sheets are available in four densities, with each density serving a different filtration purpose and providing state of the art, progressive filtration when used together. The unique 3D matrix design of this filter media slows the velocity of the water and allows solid waste to settle. This is what makes the filter media so efficient and clog resistant.

Black, low density filter media effectively removes large organic particles such as leaves, clumps of algae, seed pods.

Green, medium density filter media processes mid sized organic particles.

Blue, high density media takes care of filtering out small organic particles.

Grey, super high density media removes the smallest particles.

This progressive system allows for maximum filtration efficiency and reduces maintenance requirements as all densities work together to create a cohesive environment where they will remain highly resistant to clogging when used correctly.

Matala offer a range of versatile filtration products including:

Biological Filtration:

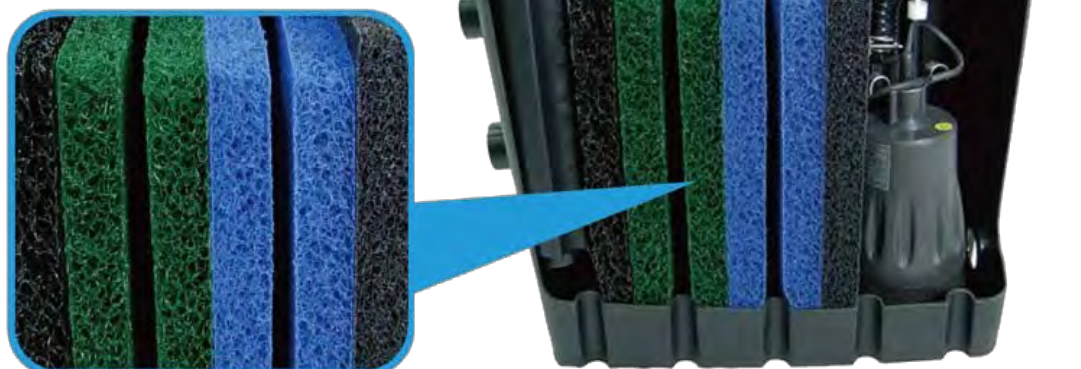

Matala Filter Media Sheets are used within the Biosteps 10 Biological Pond Filter so these filters don't clog like foam filters do. That means less maintenance and easy cleaning. For larger ponds, the Koi Clear Vortex Biological Pond Filter uses super thick coils of Matala Filter Media. Both these filters are modular so you can use more than one if your pond needs it or add more later as your fish breed and grow.

If you've already got a pond filter that isn't working well, you can improve it by adding some Matala as the sheets can be easily cut to size to replace worn out foam.

Greywater Cleansing:

Matala's powerful filtration media is also used in the Aqua2use Greywater Diversion Devices. Each layer of media removes more debris leaving you with a finished result that is perfect for irrigating your garden and lawn.

Pump Defence:

Crafted from Green Medium Density Matala Filtration Media, Pump Defenders are designed for use with submersible pumps and can increase their lifespan. Pump Defenders help prevent large debris from damaging the pump and allow fine particles to pass through without clogging. This prevents the pump from overworking, decreases maintenance and increases its lifespan. What a great, low cost investment to protect your pump.

Waterfall Creation:

The Matala Mini Fall comes pre-loaded with a sheet of medium density, Green Filter Media.

The Mini Fall is a simple way to add a waterfall to your pond and the included media filters out materials that you wouldn't want flowing through.

Pre-Filtration:

Another great use for Matala Premium Filter Media is pre-filtration. EzBio Prefilters attach to the intake side of submersible pumps. They can be attached directly to the pump or connected with a hose or pipe. That means you can have the filter at the edge of the pond so it's easy to clean. EzBio Prefilters prevent clogging, reduce maintenance, extend the life of your pump while giving the pond a biological filtration boost.

Spawning Mat and Fry Protection:

Filter Media Sheets are a great way to improve the safety of fish eggs and fry. The eggs will stick to the media, therefore helping reduce the risk of them being eaten, and fish fry can hide between the fibres if a bigger fish is intent on harming them.

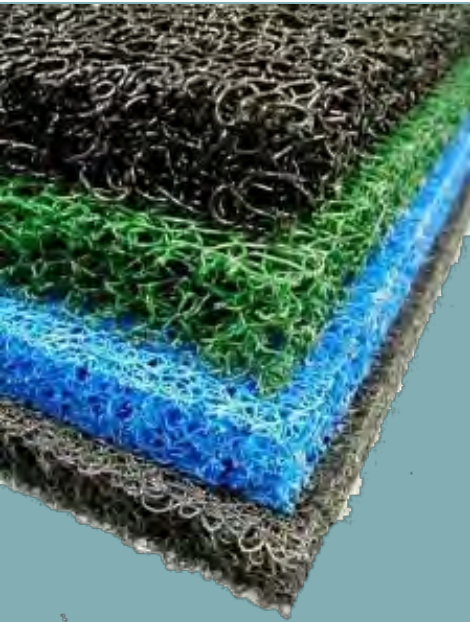

Grow Beds:

Matala Filter Media Sheets can make great grow beds for plants, fruit, vegetables and flowers. They can provide useful growing media for ponds, dams, hydroponics or aquaponics systems.

Product Specifications:

Premium Matala Filter Media Sheets:

Full Sheets of Premium Matala Filter Media measure 120cm x 100cm x 3.8cm.

Half Sheets of Premium Matala Filter Media measure 60cm x 100cm x 3.8cm.

Biosteps 10 Biological Pond Filter:

The Matala Biosteps 10 Biological Pond Filter is suitable for fish ponds up to 10,000L and Koi ponds up to 5,000L.

Biosteps 10 filter boxes measure 508mm x 381mm x 584mm.

The following optional accessories can be bought for the Matala Biosteps 10 Filter:

- Waterfall Outlet Attachment
- 18w Ultra Violet Clarifier (UVC)

Matala Koi Clear Vortex Biological Filter

The Matala Koi Clear Vortex Biological Filter is suited to ponds up to 20,000L in volume.

This multipurpose filtration unit measures 120cm x 120cm x 120cm.

Aqua2use Greywater Diverter Device

The Aqua2use Greywater Diverter Device is a best in class greywater diverter that allows the use of household greywater for irrigation purposes.

Units measure 61cm x 38cm x 55cm and come complete with the required filter media and pump.

Pump Defenders

Matala Pump Defenders are available in four sizes:

- 152mm ID x 254mm OD x 200mm high
- 228mm ID x 330mm OD x 200mm high
- 304mm ID x 406mm OD x 200mm high
- 304mm ID x 406mm OD x 360mm high

Matala Mini Fall

The Matala Mini Fall has a 285mm spillway.

This product can be used in any pond and measures 285mm long x 180mm wide and 185mm high.

EzBio Pre-Filters

Matala EzBio Pre-Filters are available in both single core and double core varieties.

The single core model has dimensions of 12cm x 12cm x 24cm and has a maximum flow rate of 7,500lph.

The double core model has dimensions of 22cm x 22cm x 24 and has a maximum flow rate of 15,000lph as a pre-filter and 5,000lph as a biological filter.

CUSTOMER REVIEWS

Highly dense, great for bacteria growth.

Dec 2019

In Sept '17 I installed a 'Blagdon 14000 water filtration system into my 50000 litre fish pond first filled and stocked with about 50 Comet goldfish the year before. After introducing the fish - with no filter, but with an aerator, the water slowly turned an undesirable shade of green. So, the Blagdon was installed, running 24/7 and over the next two years did a fair job of keeping the water reasonably clean - not 'clear', but clean. During summers the soft foam filters were removed and hosed clean every 5 - 7 days. Over winter it was every 14-21 days.

Around Oct '19 the foam filters were falling apart and needed replacing, but none were available. Looking for alternative filter media I discovered Matala sold by Love My Pond. I bought a half sheet each of blue (fine) and green (medium), easily cut them to the required sizes and put them in place. By Xmas the pond water was noticeably clearer and by January looked clean enough to drink! I am very pleased with Matala filter media.

CUSTOMER REVIEWS

While I'm sure this Matala Filter Media is a great addition to your filter system and supports the bioload to keep the pond in balance, I can't really comment on that. What I can say though is if you are looking for an inert reticulated PE-based media to slice up and install into your DIY vertical hydroponic towers then you, like I, can stop your search here.

My delicious greens needed something that their delicate roots could weave their way into, that the nutrient solution could filter through, and that could be made to fit inside a bit of down pipe. I scoured the depths of the internet searching for something, anything that would have my balcony towers ready for the 2020 salad season. Amazon, eBay, even Alibaba – nope. Even the bloke at the local foam shop told me that there wasn't a product in the market like it.

Well suffice it to say that when I came to lovemypond browsing pumps and fittings I was moved when I saw the photo of that squiggly black plastic spaghetti sheet. I mean not quite to tears, but it was an emotional moment. I had to buy it.

I've had the black Matala in my towers since September and my first round of greens were delicious. Flow through the media is excellent, and it is flexible enough that you can sandwich two slices into a pipe. Plants root well in the media and I think it will be easily cleaned for the following season with the high pressure sprayer.

Thanks lovemypond for selling and shipping.
